

Have you ever considered what would happen if your file server was stolen?

(Yes. Disaster. Touch wood!)

The new Symantec Backup Exec System Recovery. Recover your system within approx 2 ½ Hours, even to different equipment

If you assess the risk of your server becoming totally unavailable, such as in the case of a Mainboard failure, accident or theft, **full recovery from 'standard' backup tapes or USB drives could take as long as two solid days.** That's provided that your current backup is any good. Let's face it: We would need to first re-install the Windows Server operating system onto a replacement server before we could start recovering from your backup. It's a big job!

With the new **Symantec Backup Exec System Recovery**, we ran a test recovery of one of our customer's systems in just a trifle over 2 hours! And that is to "bare metal", e.g. totally different hardware.

If you have existing backup hardware (e.g. Tape Drive or USB Hard Drive) in place, this can be utilized.

This is what you need:

- Symantec Backup Exec System Recovery for **SBS 2003** license, including media
- 12 months Symantec update and support
- On-site installation and implementation on your server, configuration of your backup hardware and testing
- Test restore after the first week (of course, permanent monitoring for our Maintenance customers)

**Normal price for SBS 2003:
1,520.00 ex GST**

**Special Offer
(only for customers on a
maintenance agreement)**

\$1,200 ex GST; \$1,320 inc GST

If you don't already have suitable backup hardware:
