

# This summer, there won't be any blackouts. Yeah, Right.

Poor electrical power causes damage to both your equipment as well as your data. How much do you value your data? How much is your PC, including your home PC, worth?

**Now you can buy Top Quality Liebert power protection for the price of a cheapie (whilst stocks last).**

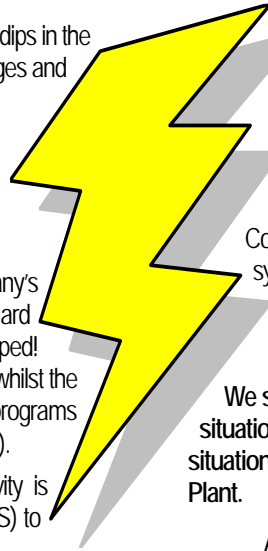

Blackouts and brownouts (brownouts are momentary dips in the power supply) can cause even worse problems than surges and spikes, particularly:

- Data corruption and data loss
- Hard drive crashes and permanent damage
- Damage which then causes intermittent errors.

In particular, the loss of data is very disruptive to a company's efficient operation. Imagine the disastrous effect if your Hard Disk Drive and all the information stored on it was zapped! Often, Hard Disk Drives are not recoverable. Thus, whilst the manufacturer may replace a drive under warranty, your programs and data still needs to be recovered (or start typing again!).

The relative cost of losing just a few hour's productivity is enough to pay for an Uninterruptible Power Supply (UPS) to support your Personal Computer and its peripherals.

The purpose of an UPS is to supply backup power from its batteries to

sensitive electronic equipment, especially computer systems. When an interruption to the mains power occurs, the UPS generates it's own power to the equipment connected. Generally, the UPS supplies power for about 15 minutes, sufficient time for you to close any files or tasks, and shut down the computer system in an orderly fashion.

Computer Friends Pty Ltd offers an extensive range of UPS systems. From compact units which support small electronic devices such as personal computers, faxes and modems, to larger systems that protect entire installations!

We supply Power Protection Equipment to suit a wide range of situations, from the private workstation through to "must not fail" situations such as the Gold Coast City Council's Water Treatment Plant.

Allow us to consult you. From our wide range of products we'll select a model suitable to provide you with the protection you need. Call us now. If you wait, your equipment may suffer damage overnight!

## Liebert Powersure Proactive II

### Uninterruptible Power Supply

- \* 3 Models - 500VA, 650VA & 1000VA.
- \* Automatic Shutdown of PC before battery runs flat
- \* Automatic voltage regulation without transfer to battery.
- \* Two-year manufacturer's warranty.

- \* Protects your computer and your modem
- \* Lightning and surge protection

		Normal Price
